# ME-RIISE Foundation - Access and Infrastructure Audit

Internal working report | Prepared 11 November 2026 | No passwords, secret keys, tokens, or private-key material are included.

Status legend: Repo-observed = visible in checked-out repository; User-reported dashboard = supplied by the administrator, not independently tested; Pending = requires provider/admin verification; Action required = remediation recommended.

## 1. Git platform, repositories, account ownership and emails

| Detail | Current information | Status | Verification / next step |
|---|---|---|---|
| Platform / repository URL | GitHub ? https://github.com/Darshu03-cell/meriise-foundation.git | Repo-observed | From local Git remote; confirm account/repository ownership in GitHub settings. |
| Local Git identity / commit email | Darshu03-cell; iamdarshanhd03@gmail.com (recent commit author: Darshan H D) | Repo-observed | Git commit identity is not proof of GitHub account email verification. |
| Hostinger account contact | meriisephotos@gmail.com | User-reported | Supplied by the administrator; verify the account profile and authorized account users. |
| Other GitHub repositories | Only meriise-foundation is present in this local checkout. | Incomplete | A complete foundation-wide repository inventory requires reviewing the GitHub account/org. |

## 2. Branches and associated projects

| Detail | Current information | Status | Verification / next step |
|---|---|---|---|
| Branches visible in local clone | main; origin/main; origin/revert-7-main; origin/testing | Repo-observed | Local refs only; verify current remote branches in GitHub. |
| Project areas in this repository | Root website; bridging-generations; courses; documents; events; static assets. | Repo-observed | Folders are project areas, not necessarily separate repositories. |
| Complete projects / repositories | Not established from this checkout. | Pending | Check all GitHub repositories, archived repos, and related organization projects. |

## 3. Users, collaborators, administrators and permission levels

| Detail | Current information | Status | Verification / next step |
|---|---|---|---|
| Known identity | Darshu03-cell appears as local Git identity/repository owner in URL. | Partial | Verify actual owner and role in GitHub repository settings. |
| GitHub collaborators, teams and roles | No access list or permission levels available in local repository metadata. | Pending | Export/review repository collaborators, team grants, outside collaborators, and organization owners. |
| Hostinger authorized users | Not provided in the available details. | Pending | Review Hostinger account access and any delegated users. |
| Database, FTP and email access | Full user/role inventory not yet provided. | Pending | Review active users and least-privilege permissions; do not record passwords. |

## 4. Access audit records

| Detail | Current information | Status | Verification / next step |
|---|---|---|---|
| Repository access events | No access grant/change/revocation audit records available in the local checkout. | Pending | Review GitHub organization/repository audit log if plan and permissions provide it. |

| Detail | Current information | Status | Verification / next step |
|---|---|---|---|
| Hostinger/server access events | Not provided. | Pending | Review available Hostinger account and server activity logs. |
| Git history | Commit history is available, but it does not establish access grants or revocations. | Repo-observed | Do not treat commit authorship as an access audit log. |

## 5. Devices, SSH keys, tokens, deployment credentials and integrations

| Detail | Current information | Status | Verification / next step |
|---|---|---|---|
| Authorized devices / SSH keys / tokens | Not inventoried. SSH is reported inactive; key inventory remains unverified. | Pending | Review account security pages and remove stale credentials. Never include secret values. |
| Deployment method | Repository contains .cpanel.yml targeting /home/example/public_html/merise. Hostinger is reported as current host. | Needs reconciliation | Confirm whether this cPanel-style deployment config is current, legacy, or unused; verify actual deployment path/workflow. |
| Integrations observed in project | Razorpay, FormSubmit, MySQL, email delivery; GitHub and Hostinger are used. | Repo-observed / user-reported | Verify active connections, owners, scopes, and purpose in each provider. |
| Credential exposure warning | Project documentation says production DB credentials and live Razorpay keys were stored in tracked files. | Action required | Treat as exposed: rotate credentials/keys, check usage, and remove secrets from source/history as appropriate. Do not copy secret values into this report. |

## 6. Hosting, domain, database, server and deployment

| Detail | Current information | Status | Verification / next step |
|---|---|---|---|
| Website / provider | meriise.org and www.meriise.org; Hostinger. | User-reported dashboard | Confirm current domain mapping and account/site status. |
| Server details | IP 62.72.28.100; server name server1118; location Asia (India); backup location Singapore. | User-reported dashboard | Operational details for internal use; validate current values in Hostinger. |
| Hosting configuration | public_html; PHP 8.2. Reported allocation: 100 GB disk, 2,048 MB RAM, 1 CPU, 400,000 inodes, 100 websites/addons, 80 max processes, 40 PHP workers, unlimited bandwidth. | User-reported dashboard | Check current plan and resource usage before any migration decision. |
| Domain / nameservers | Nameservers reported: ns1.dns-parking.com and ns2.dns-parking.com. | User-reported dashboard | Registrar ownership and full DNS records are not yet verified. |
| Databases | Two MySQL databases reported: u675758826_TBI1 and u675758826_yCfoy3; database users reported: u675758826_Darshan and u675758826_3QnxF. | User-reported dashboard | Confirm DB-to-app mapping, MySQL version, sizes, active use, and privileges. No passwords included. |
| SSH / FTP | SSH reported inactive (port 65002 and username u675758826 shown in dashboard); FTP host meriise.org, IP 62.72.28.100, username u675758826, directory public_html. | User-reported dashboard | Confirm whether FTP is still required; passwords and private keys intentionally omitted. |

## 7. Backups and restoration

| Detail | Current information | Status | Verification / next step |
|---|---|---|---|
| Backup mechanism / frequency | Daily Hostinger backups were reported by the administrator; dashboard/records not independently inspected. | User-reported; verify | Confirm schedule, retention, last successful date, and whether both files and databases are included. |

| Detail | Current information | Status | Verification / next step |
|---|---|---|---|
| Backup location | Singapore was reported as backup storage region. | User-reported dashboard | Verify in backup details and confirm retention/location terms. |
| Restore procedure / test | Restore availability and successful restore test have not been verified. | Pending | Document steps and permissions; perform a controlled restore test to staging/non-production and record outcome. |

## 8. Other development, maintenance and deployment services

| Detail | Current information | Status | Verification / next step |
|---|---|---|---|
| Services identified | GitHub, Hostinger, MySQL, FTP, FormSubmit, Razorpay, email service; VS Code Live Server is configured locally. | Repo-observed / user-reported | Check for additional analytics, DNS, CDN, monitoring, cron, storage, or automation accounts. |
| Account/service owners and access | Complete named owner and permission mapping not yet provided. | Pending | Record accountable owner, purpose, access scope, MFA status, and review date?never secrets. |

## Priority follow-up

? Rotate production database credentials and live Razorpay keys documented as previously tracked in source; check for misuse and remove secret material from repository history as appropriate.
? Complete GitHub and Hostinger user/role inventories and review available access audit logs.
? Confirm whether .cpanel.yml is active or legacy because Hostinger is reported as current hosting provider.
? Verify backup schedule, retention, files/database coverage, and perform a controlled restore test.
? Confirm registrar/DNS ownership, database mapping and privileges, and all third-party integrations.

Handling: Internal use. Do not append passwords, API keys, access tokens, database passwords, SSH private keys, or recovery codes to this document.
